

BNB CLASSIC (BNBC)

Whitepaper v1.7

BNB CLASSIC

Contract: [0x0611Eb4fC35920a591e453d167175AD014287b24](https://www.bscscan.com/address/0x0611Eb4fC35920a591e453d167175AD014287b24)

Audience

This white paper aims to inform potential investors and interested individuals on the elements, mechanics and direction of **BNB Classic (BNBC)**. Below, demonstrated in detail, is the unique redistribution mechanics paired with the tokenomics operated by the project's contract. The token currently has one of the best reward systems on the BSC. It aims to provide investor satisfaction by yielding the most reward for their investment. In the scheme of the Binance Smart Chain innovations, Safemoon may have been the pioneer in bringing awareness to RFI and HODL rewards, but **BNB Classic (BNBC)** seeks to lead in the movement for financial freedom. We hold a clear vision for becoming the most sophisticated auto-claim BUSD reward mechanism in the market.

Tokenomics Part 1

BNB Classic (BNBC) is the step forward in yield-generating contracts on the Binance Smart Chain (BSC); you receive rewards distributed in BUSD rather than token reflections and the contract employs a static reward system. This allows rewards to extend outside of simply holding our coin as would a reflection-based coin operate. **BNB Classic (BNBC) Tokenomics:**

- Token supply of 10,000,000,000,000 BNBC
- 15% Buy and Sale Tax*: - 10% BUSD is redistributed among holders - 3% is used to increase the liquidity pool. - 2% is allocated towards funding the marketing wallet. NOTE: you must hold 50 or more BUSD tokens to be eligible for the BUSD dividends.

Auto-redistribution

When buying and holding a percentage of the supply, every 60 minutes, a dividend tracker will automatically calculate and distribute dividends among holders with your respective amount directly deposited within your wallet holding BNBC. There are no actions required in order to have this work, and there is no minimum amount required to hold in order to receive your rewards. *The dividends are distributed as Binance Peg-BUSD tokens. There are no rewards reflected back into BNBC. Thus your BNBC amount held will be unaffected.

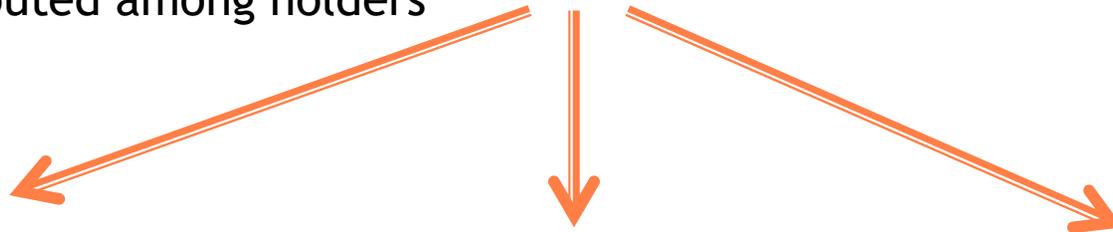

Tokenomics Part 2

\$ = BNB Classic (BNBC)

\$ = BNB Classic _Dividends Tracker

10% Reward on transaction

Every transaction has a reward in BUSD of 10% which will be redistributed among holders

10% BUSD Reflection to Holders

Hold your coins, and you will automatically be rewarded every 60 minutes. 10% of every transaction cost are used to reward all holders with BUSD.

2% Marketing Wallet

2% of the transaction costs are automatically added to the Marketing wallet to assure great Marketing for BNB Classic (BNBC).

3% Liquidity

3% of the transaction costs are automatically added to the Liquidity Pool to assure fast and secure trading.

Technical Information

Classic redistribution:

The mechanism incentivises investors by passively earning dividends by other investor transactions made throughout their time holding tokens. The redistribution is based on a percentage (in the contract), currently held token balance and number of holders influencing both volume and market capitulation. You receive more tokens passively by buying and holding your own.

BUSD Redistribution:

A transaction fee is applied to every unique sell order where the sold tokens are then swapped in real-time for BUSD and added to a POOL (similar to how liquidity pools function). Holders can then go on a website built for claiming dividends and claim the net amount of BUSD earned during a period of time since the last claim (daily / weekly / etc..). The BUSD they collect is based on the percent of the supply they hold and the current pool's size. You hold, then go on the website and request to claim your BUSD rewards or Just wait around 60 minutes to get your reward completely automatic.

BNBC Redistribution Mechanism:

Claiming manually is impractical for a few reasons:

- You have to connect your wallet manually to a website, creating an unnecessary step in order to secure your dividends.
- The wastage of time produced by the frequent need to return to the website to repeat the process whenever you wish to receive your rewards.
- Providing enough knowledge to cryptocurrency investors concerning fees, market fluctuation and transaction procedures is difficult. Therefore it is more difficult for them to be accustomed to this information until they go through the full claiming experience. This makes intelligent investing strategies hard to coordinate.

Dividend Processing and Allocation

Steps are as follows:

- The contract keeps an index into an array for processing.
- The contract keeps track of all token holders within an array.
- The token is based on a Dividend-Paying Token Standard, where all the BUSD the contract gains will be divided equally to the token holders relative to their amount held.
- Every token transaction processes a certain number of users, depending on the transaction size (bigger token transfers can process more since the gas will still be proportionally less than the value of the tokens)*
- When a user is processed, the contract checks how many withdrawable dividends they have, and if it is above the minimum threshold for auto-claims, will either automatically claim those dividends for BUSD, or automatically buy-back tokens for them.

*This refers to the purchasing and selling of tokens by holders, where smaller transactions will be batched together over time to allow for reduced accumulated gas fees to allow larger net dividend distribution. The system is fully automated and doesn't add minimal gas fees proportional to the value transferred. The number of holders processed through each transaction is dynamic and based on transaction size. Holders will receive dividends from the queue based on their position in the array. This allows for fairness among all holders.

Further Information

Additional Information

- Token Information (provisional)
- Network: Binance Smart Chain (BEP-20)
- Ticker: BNB Classic (BNBC)
- Contract address:
0x0611Eb4fC35920a591e453d167175AD014287b24
- Decimals: 18

STEALTH LAUNCH

- TOTAL SUPPLY : 10,000,000,000,000
- TOKENS FOR PANCAKE LISTING : 60%
- Pre Sale on PinkSale : 30th November 2021
- Listing on PCS Date: 01th December 2021
- Liquidity Lock: 60% - Unlock Date : 365 Days
Minimum

Locked Liquidity

Initial liquidity will be locked for a minimum of 1 year to provide holders with peace of mind that the token can always be exchanged.

Link to LP Lock:

Link from PinkSale

Anti-Dump Logic

Protection features such as max trx on sales are included. Any transaction selling more than 500B tokens will be automatically rejected. This prevents massive one-time sales that drastically impact the token price. The “Max Buy per Transaction” allows for more rewards to holders whenever a large investor buys into the token.
